

# Supported Self-Driven Learning Operating System **Tokenomics**

The use of blockchain tokens within the selfdrivenOS.

Version 0.4

# Background

selfdriven has a set of tokens for measuring value in the form of community service, achievements (linked to known skills set), endorsements and reflections.

It also has a token for recognising effort within the selfdriven Foundation organisation.

## Tokens

selfdrivenOS Tokens

|            | Token Name  | Use Case  | Policy                    |
|------------|---|---|---------------------------|
| Foundation | SDF    | For the <b>SSDLF Foundation</b> , governance, utility to power development and platform.<br>[On chain interactions / fees / rewards*] | Fungible Token (FT)       |
| Community  | SDI    | Community member <b>identity</b> token for SDE, SDR & SDA.  | Non-Fungible Token (NFT*) |
|            | SDC    | Community utility token for governance, reward for effort, caring for self/others.  | Fungible Token (FT)       |
|            | SDE   | For <b>Endorsements</b> , for positive behaviour, use as utility for services, stake for governance.                                  | Non-Fungible Token (NFT*) |
|            | SDR  | For <b>Reflections</b> , Learning reflections in the form of public endorsements etc.   | Non-Fungible Token (NFT*) |
|            | SDA  | For <b>Achievements</b> , skills, course completions / credentials etc.   | Non-Fungible Token (NFT*) |

\* Non-fungible as the token transaction ("asset") is linked a person (learner) - so unique.

Cardano Blockchain, using multi-asset functionality for tokens

The tokens are represented on the Cardano (<https://cardano.org>) blockchain as native-assets, linked to specific policyIDs.

e.g.

|                     |   |
|---------------------|---|
| Token               | SDF   |
| Policy ID           | 906ba07f6419a89d7b05cca88f0ff3ee2114936c373cb2156f8426ec  |
| View on Cardanoscan | <a href="https://cardanoscan.io/tokenPolicy/906ba07f6419a89d7b05cca88f0ff3ee2114936c373cb2156f8426ec">cardanoscan.io/tokenPolicy/906ba07f6419a89d7b05cca88f0ff3ee2114936c373cb2156f8426ec</a> |

The Non-Fungible Tokens, i.e. unique tokens, eg a learner achievement, which there can ever only be one of, includes metadata (ie data) with details of, in this example, the achievement.

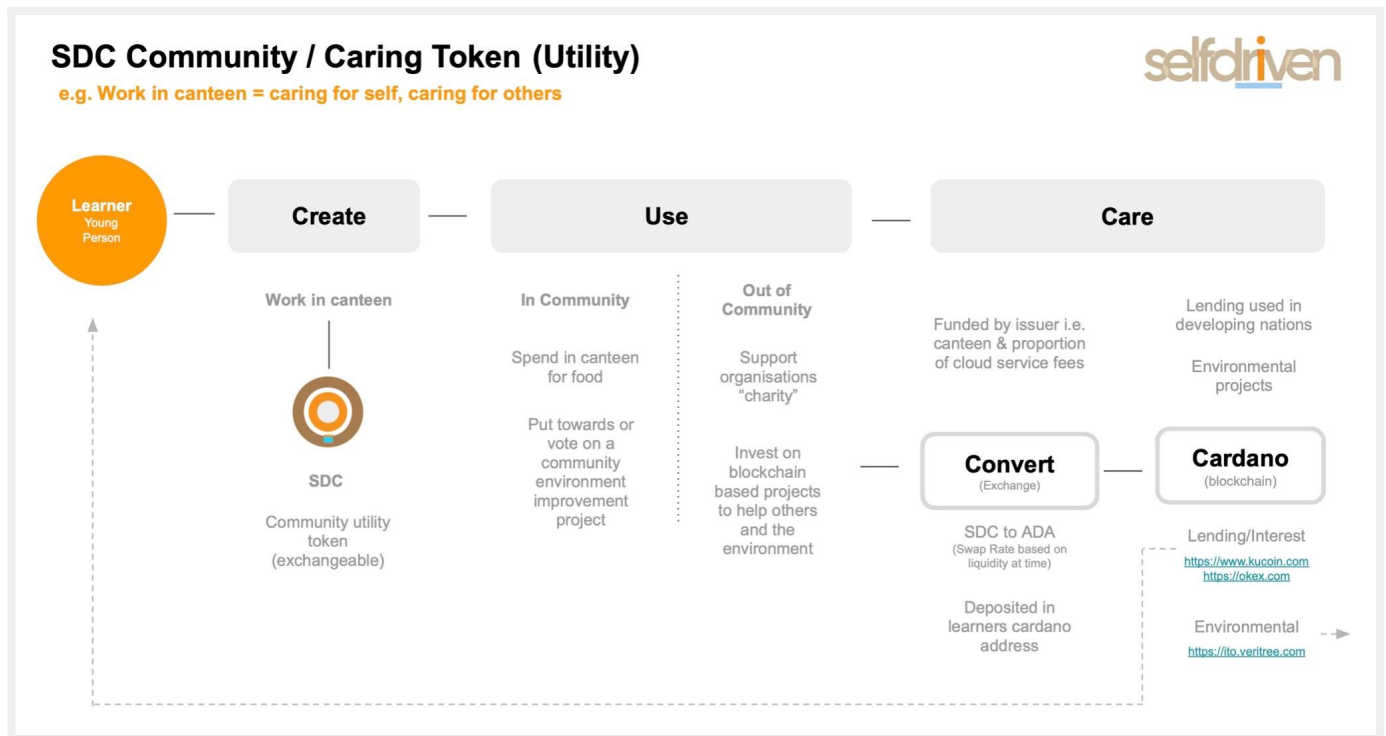

## SDF; selfdriven Foundation Token

Issued to foundation founding and advisory members. Limited to 200,000 tokens.

## SDC; selfdriven Community Token

Used for recognition of community service, positive attribute, accountability etc

1,000,000,000 tokens created initially. More will be created as required.

## **SDI; selfdriven Identity Token**

The SDI token is used to record identities on-chain, so can be referenced in other on-chain tokens (assets) e.g. a SDA.

The identity token types are:

- Community Members (learners and learning-partners as individuals)
- Community Organisations (learning-partner organisations, eg University)
- Skills (standard known set of skills)
- Project Template
- *The types above are also recorded as an SDI as type: "type".*

Other types can be added as needed.

"sdi" is the selfdriven Unique ID.

The on-chain asset name is the "sdi" with the hyphen removed and converted to base16 (Hex).

Selfdriven Identity (SDI) will also work with other Digital IDs (dids) ie [atalaprism.io](https://atalaprism.io).

## **SDA; selfdriven Achievement Token**

Achievement tokens that are linked to known skills and the community member as represented by SDI tokens.

"sda" is the selfdriven Unique ID.

The on-chain asset name is the "sda" with the hyphen removed and converted to base16 (Hex).

## selfdriven On-Chain Policy IDs

The following are the official selfdriven *Cardano Policy IDs*.

| Token      | Policy ID   |
|------------|---|
| <b>SDF</b> | 906ba07f6419a89d7b05cca88f0ff3ee2114936c373cb2156f8426ec<br><a href="https://cardanoscan.io/tokenPolicy/906ba07f6419a89d7b05cca88f0ff3ee2114936c373cb2156f8426ec">cardanoscan.io/tokenPolicy/906ba07f6419a89d7b05cca88f0ff3ee2114936c373cb2156f8426ec</a> |
| <b>SDC</b> | e487d8ea06a917008df8822d65140cc933af324e805f4ddcae8fc089  |
| <b>SDI</b> | [TBC]   |
| <b>SDA</b> | [TBC]   |

## Lab Zone Policy IDs

These are used by the selfdriven Lab team for testing and showing by example.

The assets/data held within these policies are not valid and should not be used in any real-world uses..

| Token            | Policy ID  |
|------------------|--|
| <b>SDC (lab)</b> | [TBC]  |
| <b>SDI (lab)</b> | 92be578d1c063b70edf9b2ca0b53c7a58142b65eba43a5b55bdd6cb7 |
| <b>SDA (lab)</b> | 96dd4df64ec0857af3a90ebdb5d3318fbef6774fe8c4b50e090af1c6 |

## Metadata

Token transactions include metadata that links the transaction back to the selfdrivenOS data i.e. and achievement linked to skills.

selfdriven has a number of meta-data formats based on the token type, with each being uniquely identified by a *Metadata ID (ASCII representation of the token name)*.

| Token Name | Metadata ID | Notes   |
|------------|-------------|---|
| SDF        | 115100102   | Foundation (200,000). Locked.                               |
| SDC        | 11510099    | Community (1,000,000,000)                                   |
| SDI        | 115100105   | Identity (Community Members, Community Organisation, Skill) |
| SDA        | 11510097    | Achievement   |
| SDR        | 115100114   | Reflection  |
| SDE        | 115100101   | Endorsement   |

## Examples

## User Experience

- Tokens are accessible within app.selfdriven.cloud via integration for BlockFrost
- Wallet set up and interactions is planned to be via whitelabelling of [face.io](https://face.io) Wallet once it is available.

## Selfdriven Play / Gamification

- Supporting play within a learning community.
- Use tokens and NFTs to learn-to-earn
- Use learner art work.
- Earned NFTs = SDC multipliers and also add to the learners SDN.
